

ELECTRIC VEHICLE CHARGING STATION

WELCOME TO THE FILLING STATION OF THE FUTURE

MODELS EVSE-RS AND EVSE-RS+

Welcome to our electric vehicle (EV) Charging Station line – the system of safe and reliable electric vehicle supply equipment (EVSE) that turns your garage into a personal filling station. Imagine “fueling” your car while you sleep, enjoy a meal, or spend time at home or at work. Our base model EVSE-RS and smart charge model EVSE-RS+ recharge your car while you recharge your life.

You’ll be pleased to learn that your personal electric filling station is easy to use. The EV Charging Station mounts on to your garage wall near your parked electric car – or, if you prefer, we can pedestal mount the charger if you are in the habit of parking your car in an area where a wall isn’t nearby. A green light will tell you it’s ready to charge. A blinking light tells you it’s charging. When it’s done, it stops automatically. You can plug in and unplug at any time, safely and securely – it’s that simple.

WELCOME TO:

SAFETY

- Automatic short circuit shut off
- Automatic ground fault shut off
