- Americans with Disabilities Act (ADA) compliant installation
- Underwriters Laboratory (UL) listed
- Safeguards designed against live power
- Cable stowage
- Optional network communication modules

Bring easy-to-use, safe, and reliable electric car charging to your tenants with AeroVironment's line of EV Charging Stations for multi-dwelling units. The EVSE-RS is mounted in your building's parking structure or outdoor parking area and charges electric vehicles (EVs) and plug-in hybrids (PHEVs) in just a few hours while your tenants sleep, enjoy a meal, or spend time with the family. Because all of our Charging Station models conform to an industry connector standard, they can connect to and charge any vehicle that meets the same standard.

The Charging Stations come in single, dual, and quad-port configurations.

- **Single port:** Individual parking space mounting
- **Dual port:** Between parking spaces
- **Quad port:** Between spaces in double-row parking lots

Multi-port systems can reduce installation costs by consolidating electrical runs and mounting locations.
